PRODUCT WARRANTY

This is what Made in America looks like.

More than 20 years ago we developed the first carbon fiber barrel here in Utah. Today, we're still innovating and building some of the lightest and most accurate firearms ever produced. From our precision rifles to custom 1911 handguns and our top-of-the-line AR-10 and AR-15 platforms, it's easy to see why Christensen Arms owners are often envied, and rarely outmatched.

BORN OUT OF THE AEROSPACE INDUSTRY

Founded in Utah in 1995, with roots in the aerospace industry, Christensen Arms developed the first carbon fiber rifle barrel. This patented technology changed the way we built firearms, and challenged us to seek innovation in every component.

21 YEARS
COMPOSITES
EXCELLENCE

Built on more than 20 years of firearms experience and top-tier aerospace materials and processes, Christensen Arms manufactures some of the most lightweight, precise, and accurate firearms in the industry.

MADE IN
THE USA

From the very first prototype to our most popular models today, our firearms have always been the product of American design, and the best of American manufacturing. Our factory is based out of a small town in Utah, where we're proud to build guns that will travel the world.

BARREL TECHNOLOGY

AEROGRADE CARBON FIBER AND STAINLESS STEEL BARRELS

When we first developed the carbon fiber barrel, we knew it was going to become one of the most innovative advances in firearms in recent decades. Offering superior strength and rigidity over traditional heavy-profile barrels and the extreme light weight of light-profile barrels, our carbon fiber barrels are engineered and manufactured in house from aerograde materials to ensure they meet the same high standards and quality control you would expect from any product carrying the Christensen Arms name. Our button-rifling procedure utilizes aerograde processes and specifications for every rifle barrel we produce. Our barrels are reamed and inspected to a tolerance of +/- .0001. Our technology and aerospace pedigree guarantees precise measurements and verifications of twist rates that ensure a repeatable and highly accurate rifle.

CARBON FIBER

Designed by precision engineering adopted from the aerospace industry, our carbon fiber barrels are crafted using a proprietary layered design that fully utilizes the strength and thermal conduction benefits of carbon fiber to achieve more consistent barrel harmonics and accuracy. The barrel lining is machined from 416R stainless steel, button rifled, with a bore tolerance of +/- .0001.

STAINLESS STEEL

Built using 416R stainless steel, our stainless barrels are precision machined to the industry's highest standards, stress relieved, and hand lapped to guarantee sub-moa accuracy.

MATCH CHAMBER

Every Christensen Arms chamber is CNC machined using minimum-diameter match-grade reamers and optimized for accuracy and performance.

BOLT RIFLES

Coming from a long lineage of outdoorsmen and hunters, we set out to improve the hunting experience by creating highly accurate and exceptionally lightweight rifles. Utilizing top-tier aerospace materials and processes, Christensen Arms firearms are preferred by enthusiasts and passionate hunters around the globe.

3-shot group
inside 1 MOA

CHRISTENSEN ARMS ACTION

All stainless Christensen Arms actions are machined from a solid billet of heat-treated 416T stainless steel and utilize precision surface ground recoil lugs. Each half-MOA rifle is blue-printed with lapped lugs and trued receiver faces. Our actions are available with integrated 20 MOA, split Picatinny rail, or standard Remington® 700 optic base standard.

CHRISTENSEN ARMS TITANIUM ACTION

All Christensen Arms titanium actions are formed from a billet of Ti-6AL-4V, then machined to include integral Picatinny bases. Each receiver is paired with a bolt and the lug recesses are hand lapped for a precise fit.

INVAR PILLARS AND SPOT BEDDING

Christensen Arms' bolt action rifles with carbon fiber composite stocks feature dual bedding pillars constructed from Invar, a nickel/iron alloy known for its uniquely low coefficient of thermal expansion. Unlike aluminum, Invar pillars do not expand or contract with temperature changes so you will not experience variances in bedding or accuracy. In addition, we spot bed the recoil lug area to ensure stability and optimal performance.

V-BLOCK BEDDING

Our Modern Precision Rifle chassis is precision CNC machined from a billet of 7075-aluminum with a v-block style bedding footprint. This results in a uniform fit between the action and chassis creating an extremely accurate shooting platform.

AEROGRADE CARBON FIBER STOCKS

Our AeroGrade Carbon Fiber Stocks are engineered using advanced aerospace materials and processes to take full advantage of the superior strength of carbon fiber the lightest, most rigid stocks available. Our stocks are hand built in-house by a trained, composite technician to ensure an exceptionally high-quality stock with the ultimate strength-to-weight ratio. They are available in a number of styles and finishes to suit your needs.

HAND LAID CARBON FIBER COMPOSITE STOCKS

Our Carbon Fiber Composite Stocks are engineered to offer the user a strong, yet lightweight composite stock at an affordable price. Like our AeroGrade stocks, these are hand laid and available in a number of styles and finishes. Our carbon fiber composite stocks use Invar pillars to reinforce the bedding foundation.

MESA

6.5-7.9 LBS — SUB MOA — \$1,295 MSRP

MESA

For a traditional steel-barreled rifle, we still build the very best. The Mesa was created as a premium, yet accessible lightweight rifle with a featherlight-contour, stainless steel barrel and a carbon fiber composite stock. Weighing in at only 6.5 pounds (short action) and carrying the Christensen Arms Sub-MOA Guarantee, the Mesa is the perfect rifle to carry deep into the backcountry.

CA-10 DMR

DESIGNATED MARKSMANSHIP RIFLE

If you are seeking the ultimate in MSR performance, power, lightweight, and long-range potential, the CA-10 DMR is your ticket. Originally designed for the 7.62x51/308 Win, Christensen Arms has expanded the caliber offerings to include 6.5 Creedmoor, .243 Win, and .260 Rem. The feature-rich CA-10 DMR is not only the flagship of Christensen Arms' MSR product line, it's the benchmark for all 7.62x51/308 Win-based AR weapon platforms.

1911 HAND GUNS

Using only premium materials such as titanium, stainless steel, and carbon fiber, Christensen Arms strives to craft the finest 1911 handguns ever produced. After being machined, each slide is hand fit to its frame to guarantee a perfectly smooth and highly accurate handgun supported by an industry leading accuracy guarantee.

ACCURACY GUARANTEE

We put our name on it, and we stand behind it. Each handgun we produce is function tested and guaranteed to shoot a 5-shot, 2 inch group at 25 yards before it leaves the Christensen Arms facility.

A - SERIES

1911

9MM/45 ACP

ALUMINUM FRAME

Our A-Series handguns deliver the same celebrated performance and accuracy Christensen Arms is known for in a new aluminum frame. Currently available in 9MM or 45 ACP, each frame is machined from 7075 billet aluminum and assembled using only premium components, including a tunable match-grade trigger. After being machined, each slide is hand fit to its frame to guarantee a perfectly smooth and highly accurate handgun. Weighing in at roughly 2 lbs, the new A4 is the lightest 1911 we produce.

STAINLESS STEEL
OR TITANIUM FRAME

Christensen Arms Classic 1911 handguns are designed and manufactured to be the premium standard in hand-crafted 1911s. Available with either a titanium or billet stainless steel frame, each 1911 handgun is hand built using premium components including a highly accurate match-grade barrel. Our slides are fully machined from 17-4 stainless steel or Damascus steel with the Christensen Arms “ram head” serrations and hand fit to ensure an ultra smooth and accurate operation.
