## PM II Multi-Turn II Riflescopes

## MULTI-TURN II TURRET

### Highly Intelligent, Lockable, Repeatable, & Functional Elevation Adjustment

- › Schmidt Bender Multi-Turn II turret adjustment is a 5-turn turret having visible and tactical indicators. A window at top of the turret clearly indicates the rotation status - 1 to 5 in numerical values.
- › Dial sub-zero stop setting and get maximum accuracy.
- › Get extremely accurate per-click adjustment value, where each click value is ½ cm or 0.050 Mil, helping tactical shooters get finer zeroing. Therefore, you get greater precision in long range tactical shooting.
- › Two versions of click adjustments are available - 393 cm (39.3 Mil) and 270 cm (27 Mil)

- This lever operates within 3 positional settings. The adjustment remains in the locked position when the lever points towards the muzzle of the barrel.
- When you rotate the lever in counter-clockwise direction, the adjustment gets unlocked, allowing for MTC (More Tactical Click) feature.
- When you rotate the lever counter-clockwise to the final position, the adjustment not only gets unlocked but also bypasses the MTC feature.
