

STEINER

Nothing Escapes You

2019 DEALER WORKBOOK

**WORLD-CLASS
GERMAN ENGINEERING**

In 1947, Karl Steiner started a one-man workshop in Bayreuth, Germany, obsessed with a single goal: creating optical products so functional, sturdy and uniformly flawless that nothing in the world could compare.

RAZOR-SHARP IMAGE CLARITY

100% IN-HOUSE OPTICS - Steiner grinds and polishes its own premium lenses and BaK4 prisms.

PROPRIETARY COATINGS - Steiner advanced lens coatings are applied to every air/glass surface to enhance light so your eyes perceive more contrast and brighter detail, even in low-light conditions.

**BLASTED BY AN IED IN IRAQ...
STILL WORKING**

These binoculars came out charred and misshapen, armor and chassis disfigured by fire and impact - but still working with the lens and prism systems intact.

**OVER 72,000
STEINER M22 BINOCULARS**

have served the U.S. military. When all is on the line, people around the world rely on Steiner, so can you.

Riflescope Technology

For over 70 years, Steiner-Optik in Bayreuth, Germany has set the bar in premium rifle optics. Over 460 exacting steps ensure rigorous quality throughout design and manufacture. Relentless innovation creates technologies like the N2 Injection™ System, Steiner Nano-Protection®, and Neverlost Turrets. No optic will serve you better.

FEATURES:

NEW 6X AND 7X ZOOM SYSTEMS

Steiner now offers 4x up to 7x zoom systems providing the perfect solution for your application. These systems provide maximum range at the high end, wider field of view at the low end, and eliminates any tunneling effect to deliver the best image possible to your eye.

PRECISION ADJUSTMENT SYSTEMS

Pinpoint accuracy is easily achieved with Steiner windage and elevation adjustment systems. Adjustment clicks are firm and audible. Tactical riflescopes have large, oversized knobs with easy-to-grip designs that allow for positive, non-slip adjustments.

RUGGED CONSTRUCTION

Steiner scope tubes are milled from solid, high-grade aluminum stock so there are no welds or seams, for greater strength and durability. Hunting riflescopes feature 30 mm tubes, while the high-magnification tactical riflescopes boast oversized 34 mm tubes that provide greater elevation and windage adjustment at longer ranges.

BUILT FOR ABUSE

Durability is put to the test to ensure all Steiner riflescopes are fully shockproof to withstand endless abuse from high-powered calibers. Scopes are impact tested on all optical and electronic components, and can withstand up to 900 Gs of impact.

LIFETIME HERITAGE WARRANTY

The Steiner Heritage Warranty means we stand behind our products. We will repair or replace your product at no charge to you. It covers all riflescopes and binoculars sold in the US and Canada.

RETICLE SPECIFICATIONS

Steiner is one of the largest manufacturers of high-quality optics in the world. Steiner riflescopes are German engineered and made for hunters and precision shooters who demand the best. These scopes are optically and mechanically superior to scopes that cost thousands more.

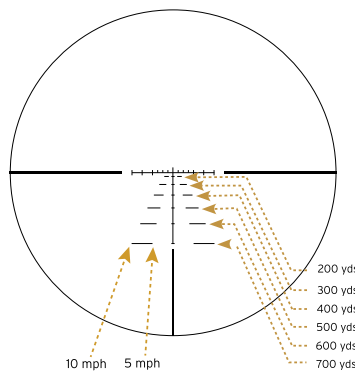

We offer a variety of reticle designs for both hunting and precision shooting. This guide explains the reticles that we offer, how to best use them for more precise aiming, and how to adjust for holdover at long distances and hold-off for wind.

Binocular Technology

The more light through the lenses, the sharper the image, which is critically important in low-light military situations. Steiner's advanced optics dramatically enhance light transmission, for exceptional clarity in the most challenging conditions. 100% in-house optical capability ensures absolutely consistent, premium lenses and prisms, with world-leading coatings for bright, high-contrast images.

FEATURES:

PROPRIETARY LENS COATINGS

The combination of premium Steiner glass and proprietary lens coatings results in a viewing experience that is second-to-none. All lenses are multicoated, with a variety of specific coatings like the Diamond Night Marine® and Nano-Protection lens coatings that enhance light transmission and provide ultimate protection against dirt, dust and all of Mother Nature's element.

WITHSTANDS 40 G'S OF IMPACT

Steiner's Makrolon® Housing combines an unbreakable polycarbonate frame with a NBR Long Life rubber armoring for a light weight and rugged chassis that can withstand 40 G's of impact. NBR Long Life rubber armoring is durable, slip-proof and noiseless to ensure a secure grip in all conditions.

KNOW THE DIFFERENCE

PORRO PRISM DESIGN

Porro prism binoculars are extremely tough and dependable, creating sharp, clear images and 3D viewing even at long distances.

Always in Focus - with Sports-Auto-Focus™ everything stays in focus from 20-yards to infinity. Makes for easy onehanded operation and effortless low light viewing.

ROOF PRISM DESIGN

Roof prism binoculars are extremely light weight, compact and streamlined, making them easy to pack, carry, hold and use.

FOGPROOF & WATERPROOF

For absolute fogproof and waterproof protection, Steiner seals 14-psi pressurized dry nitrogen into its optics, ensuring premium clarity in any condition. Steiner's proprietary N2 Injection System® pressurizes optics with nitrogen and trace helium. If the seals are not completely tight, hyperbaric testing reveals escaping helium molecules, the optics are disassembled and the process is repeated.

SUPERIOR RUBBER ARMORING

More commonly referred to as Buna-N or Nitrile rubber, NBR (Nitrile butadiene rubber) is a superior rubber armoring. Unlike many other rubbers, it has the ability to withstand oil, fuel, and other chemicals. Another important advantage is that NBR rubber has an excellent resistance to heat aging and thus does not harden or lose its protective capabilities like natural rubber does. NBR characteristics do make an excellent choice as it should withstand dirty and greasy hands as well as being left out in the sun or in a hot car.

eOptics Technology

Steiner eOptics products utilize innovative state-of-the-art technologies that make you more effective in the field and provide a higher level of performance, even in the harshest of environments. You can let your instincts and training take over and still be confident, accurate and highly effective.

FEATURES:

STATE-OF-THE-ART ENGINEERING DEPARTMENT

Steiner eOptics maintains a cutting-edge engineering department with a full complement of experienced mechanical, electrical and optical engineers. These professionals are supported by highly skilled electrical and mechanical technicians.

RAPID PROTOTYPING

Once the initial design process is finished, rapid 3-D printing stations are used to prototype and perfect the design. We have access to suppliers and resources to quickly take a design project from bare concept to a working, testable prototype.

ASSEMBLY

Once parts are received, the design team is able to assemble and test laser and illumination systems in a state-of-the-art eOptics lab.

QUALITY ASSURANCE

Steiner eOptics maintains an ISO 9001:2008 Quality Management System and has continuously maintained an ISO 9001 QMS certification since 2001. Quality plays a very important role at Steiner and starts with the design and development process. During the initial design review, our engineers evaluate their design concept to make sure that it will meet the necessary quality requirements.

A PROVEN TRACK RECORD

Steiner eOptics has a proven track record as a government contractor supplying military lasers and lights to the U.S. Department of Defense as well as to NATO customers. In addition to supplying products to our military customer, Steiner eOptics has also been selected to provide design and development services by the U.S. Government and other prime contractors.

KEY TEST AND ASSEMBLY CAPABILITIES

- A Class 100 clean room for the assembly of sensitive optics products
- Sensitive optical power meters and beam characterization cameras with the necessary filters and apertures for measuring all laser outputs from 500 nm to 1.5 microns at output powers from .01 mW to 500 mJ
- Laser safety room with controlled access and safety shielding to accommodate high-energy lasers to 500 mJ
- A full array of environmental test equipment

PRODUCTION PROCESS

The production process ensures that any defects in assembly are caught as early as possible. The majority of the assembly stages also have a matching test stage used to confirm that the prior production step was properly performed.

RIGOROUS TESTING PROCESSES

MECHANICAL SHOCK, TO SIMULATE THE WEAPONS ON WHICH THE DEVICES WILL BE MOUNTED

MECHANICAL VIBRATION, TO SIMULATE TRANSPORT ON MILITARY AND COMMERCIAL VEHICLES INCLUDING ROTARY-WING AND FIXED-WING AIRCRAFT

HIGH AND LOW TEMPERATURE OPERATION AND STORAGE TESTING, WHERE THE DEVICES ARE EXPOSED TO THE MAXIMUM EXPECTED OPERATING TEMPERATURES AND STORAGE TEMPERATURES

TEMPERATURE SHOCK, WHERE THE EQUIPMENT IS HEATED TO A HIGH TEMPERATURE AND TRANSITIONED INTO A VERY COLD TEMPERATURE WITHIN A FEW SECONDS

IMMERSION TESTING, BOTH SIMULATED AND TO ACTUAL DEPTHS AS FAR AS 66 METERS

ADDITIONAL ENVIRONMENTAL TESTING MAY INCLUDE EXPOSURE TO SALT FOG, SAND, OR DUST AND ELECTRO-MAGNETIC SHOCK TESTING
