

The APC PRO is the next generation submachine gun. The most common 9 mm SMG in service has been on the market for over 50 years. It is much older than most of the operators who are carrying it. The APC PRO is the obvious successor to this excellent but outdated product.

The combination of so many different configurations, calibers, stock options, suppressors, accessories, training versions and the unique ability to accept either Glock or SIG P320 magazines gives the APC PRO a certain edge when a weapon has to be tailored to the needs of any service. It is virtually a bespoke product, resulting in a tailor made gun for the operator while at the same time offering great savings to the service.

The excellent design has been independently tested not only by several police forces and SWAT teams all over Europe but also by major NATO armies. The APC PRO is able to produce sub 100 mm shot groups at 35 meters. The unique hydraulic buffer will reduce the felt recoil, so much that bursts are easily to control and to keep on target. The weapon is drop safe, truly ambidextrous and its fast and easy to service. The reliability of the APC PRO is second to none. During procurement tests it outperformed its competitors in many areas, but most important by its superior low failure rate. In one of the latest tests it had only 2 failures out of 18,000 rounds fired.

Swiss innovation – Swiss quality

Modell overview / technical data							
Modell	APC9 PRO	APC9 K PRO	APC9 SD PRO	APC40 PRO	APC10 PRO	APC45 PRO	APC45 SD PRO

APC PRO - ADVANCED POLICE CARBINE

Stocks

A large selection of stocks such as foldable, telescopic, helmet, fixed, etc. is available.

Shock Absorbing Buffer (Inside)

The hydraulic buffer system reduces recoil, improves accuracy and speed for follow up shots. It also eliminates bolt bounce, protects optics and reduces wear and tear. With automatic fire the results are much tighter burst groups.

Aimpoint® ACRO

Ultra compact red dot sight provides fast and accurate target acquisition for all users regardless of expertise.

Charging Handle

Fully ambidextrous, foldable, self retracting, non-reciprocating, ergonomically placed for fast manipulation with forward hand.

Pistol Grip

The interchangeable (M4 interface) grip is optimized for fast target acquisition and all hand sizes. It also offers an integrated compartment for storage of spare batteries, etc.

Controls

Bolt catch/release, magazine catch, safety/selector are truly ambidextrous, with exact same positions on both sides.

Synergy effects

Versions:
9 x 19 mm: Glock, SIG, B&T
.40 S&W: Glock
10 mm Auto: Glock
.45 ACP: B&T

Being able to use the same magazine in the duty pistol as in the sub-machine gun, gives the operator a significant tactical advantage and offers great costs savings to the agency. This is why B&T offers three different lowers to accommodate Glock magazines*, SIG P320/M17 magazines or B&T magazines. All lowers are available in a semi-automatic only version as well as in a selective fire version. The lowers are compatible - without any modification- to all corresponding uppers.

* All double column magazines of the respective calibre.

Adaptable

The perfect weapon for any particular operation can make the difference between success and failure. While covert operations or close protection require a very short weapon, other tasks may require a suppressor. Therefore B&T offers, besides the standard upper, a very compact upper as well as one with an integrated suppressor. All uppers are compatible with the corresponding lowers.

Versions:
Suppressed (SD): 9 mm x 19, .45 ACP
Standard: 9 mm x 19, 10 mm Auto, .40 S&W, .45 ACP
Compact (K): 9 mm x 19
